

Technip Subsea 7 Asia Pacific

Technip Subsea 7 Asia Pacific (TS7) is a focused subsea engineering and construction company, offering key expertise and technologies in both shallow and deepwater subsea field developments.

About Technip Subsea 7 Asia Pacific:

Formed in 2006 with the joining of the two **leading** subsea construction contractors in the Asia Pacific region, the new company has a quality pool of resources and assets. TS7's **experience** in subsea development is extensive and the company is fully committed to maintaining the highest of **safety** standards. With the combined strengths of Technip and Subsea 7 in Asia Pacific, the new company has the capability to handle the increasing technological demands of the deepest subsea developments in the region.

Location:

TS7's project offices are based in Perth, Kuala Lumpur and Singapore. The region of operation includes all of Asia Pacific.

Personnel:

The company employs over 250 people, many of whom are **experienced** engineering specialists including installation, structural, pipeline and design engineers.

Management Systems:

TS7 is certified to the following standards:

- Occupational Health and **Safety** Management System - OSHAS 18001:2001
- Environmental Management System - AS/NZS ISO 14001:2004
- Quality Management System - AS/NZS ISO 9001:2000
- **Safety** Management System - AS/NZS 4801:2001

Assets:

TS7 operates two regional diving support vessels; the dynamically positioned *Venturer* and *Rockwater 2*. The company also has ready access to other vessels in the Groups' fleets, including rigid pipelay vessels.

TS7 operates various specialist equipment necessary for installation of flexible pipe, umbilicals and coiled tubing as well as a hyperbaric welding spread. TS7 designs and engineers flexible pipe in-house and manufactures the product utilising Technip's facilities. TS7 uses deepwater work class Triton XL ROV systems which are a proven technology, reliable and capable of interfacing with the range of subsea tooling and connection systems used in deepwater construction activities.

Services:

Both Technip and Subsea 7 own a wide range of technologies for "SURF" (Subsea Umbilical, Risers and Flowlines) activities; in particular, those required for challenging deepwater developments. The company benefits from not only the combined local experience and expertise but also the ready access to expertise contained within the wider Technip and Subsea 7 Groups.

Technip Subsea 7 Asia Pacific provides engineering, procurement, construction, installation and maintenance (EPCIM) services including:

- Subsea construction
- Inspection, repair and maintenance (IRM)
- Deepwater services and technologies
- Pipelay services
